

**STUDY OF DEEP EARTH STRUCTURE USING CORE PHASES AND THEIR
SCATTERED ENERGY RECORDED AT SEISMIC ARRAYS**

Zuihong Zou, M.S.

An Abstract Presented to the Faculty of the Graduate
School of Saint Louis University in Partial
Fulfillment of the Requirements for the
Degree of Doctor of Philosophy

2008

Table of Contents

List of Tables	vi
List of Figures	vii
CHAPTER 1: Introduction	1
CHAPTER 2: The Structure of the Base of the Outer Core Inferred from Seismic Waves Diffracted Around the Inner Core	6
2.1 Introduction	6
2.2 Assembly of PKP_{Cdiff} Waveform Database	11
2.3 Analysis of Differential Travel Times ($PKP_{Cdiff}-PKP_{DF}$)	13
2.3.1 Data Processing	13
2.3.2 Data Modeling	18
2.4 Analysis of Amplitude Ratios (PKP_{Cdiff}/PKP_{DF})	20
2.4.1 Data Processing	20
2.4.2 Data Modeling	22
2.5 Discussion	26
2.5.1 Hypothesis #1: A Rough ICB	28
2.5.2 Hypothesis #2: A Slurry Zone at the Base of the Outer Core	29
2.6 Conclusions	30
CHAPTER 3: Partial Melt in the Lowermost Mantle Near the Base of a Plume	34
3.1 Introduction	35
3.2 Data	37
3.3 Ray Parameter of PKP_{Cdiff} Coda	40
3.4 The Origin of the PKP_{Cdiff} Coda	43
3.5 Conclusions and Discussion	51
CHAPTER 4: Using PKP Precursors Recorded at IMS Arrays to Determine the Small- scale Heterogeneity in the Mantle	53
4.1 Introduction	54
4.2 Data Processing	58
4.3 Modeling Global Average PKP Precursor Envelopes	63
4.4 Regional Variations of PKP Precursor Amplitude	74
4.5 Conclusions and Discussion	76
Appendix: Copyright Permission	79
References	81
Vita Auctoris	90

List of Tables

Table 2.1: Events and seismic arrays used in this study	14
Table 4.1: IMS seismic arrays used and the number of events selected	60
